■ I talked a hack about...

debexpo (mentors.d.n)

Welcome to mentors.debian.net

Only approved members of the Debian project (Debian Developers) are granted the right to upload packages. Packages in the Debian archive that are maintained by non-official developers. How do they get their work done? A process called *sponsorship*. Sponsorship means that a Debian Developer uploads a package for technical correctness and helps the maintainer to improve the package.

Note, not only Debian Developers are allowed to review packages. Everyone is encouraged to help.

Getting your package into Debian

See [our introductory page for maintainers](#) and learn how to use mentors.debian.net [sponsorship](#) to learn how to get in touch with a sponsor.

If you are curious about *Debexpo*, the software which is running this site, you can find it on [SourceForge](#).

Hi @olasd & @kenhys ,

Thanks for filing it and the initial review. I'll try to take a look on Monday (in two days). If I don't, then it will have to wait until during Debconf.

■ He said that he will review it at that time...
